**1 SIEMATIC BEAUX ARTS KITCHEN**

Most of its kitchen systems are made of wood, a highly renewable, recyclable material. They use advanced cutting equipment to reduce waste, and all wood scraps are recycled in furnace systems for energy. *Focus Global, Twenty-four Seven McKinley, 24th Street corner 7th Avenue, McKinley Parkway, Bonifacio Global City, 705.9999*

**2 HAIKU BIG ASS FANS**

A fan that uses around the same amount of energy as a regular light bulb with technology that adjusts to the environment. I love the minimalist design, too. *Philippine Geogreen, 332.2657*

**3 DORNBRACHT LISSE FAUCET**

The special water-saving variant of the faucet has 21 fine individual jets which can reduce the standard flow rate of 5.3 liters per minute to 3.8 liters. *Focus Global*

**4 COLOR MY WORLD FLOORING**

Mostly made with marble dust and sludge, achieving zero total waste in the company's production process, this flooring is used in innovative applications. *Color My World, 514.7187*

**5 WALL FILM**

Compared to wallpaper which typically uses adhesives that contain harmful volatile organic compounds or VOCs, wall films are a healthier alternative. Wooden finishes look like the real thing, so no need to cut down trees either. *Accentik, 434.4448*

**6 WOLFE INDUCTION COOKTOP**

Induction cooking is so energy efficient that it outperforms gas and electric cooktops. There is no wasted heat because energy is supplied directly to the cooking vessel. *Focus Global*

**7 SOLATUBE 220 DS**

This product brings daylight into your home without harmful UV rays and heat commonly associated with traditional skylights. *Philippine Geogreen*

**8 SUB-ZERO REFRIGERATOR AND FREEZER**

Featuring a dual-compressor system with antimicrobial air purification, this refrigerator also brings down energy use to consume only less than that of a 75-watt light bulb. *Focus Global*

**9 MIELE WASHING MACHINES AND TUMBLE DRYERS**

These ecological washing machines consume the exact amount of water and electricity needed. They have the highest A+++ energy efficiency rating or 40 percent better than certification standards. Miele has also reduced the electricity consumption of its tumble dryers by 60 percent, which is why it boasts a six-star energy efficiency rating. *Focus Global*

**10 BOFFI PAPERSTONE SURFACE FILM**

Made from recycled paper and cardboard, with a resin derived mainly from pressing the shells of cashew nuts. This film, with its natural colors and textures, exudes the right amount of elegance into a space with less guilt. *Focus Global*
